

Making Maths Real

In June 2017 we held 'Making Maths Real' workshops for parents and carers.

Don't think of maths as something you have to sit down quietly and do with your child.

Make maths fun, interactive and build it into your everyday routines!

Have a look on our website under the curriculum section - Maths - and find many resources to support your child's learning and enjoyment at home, or come in and ask us for ideas!

This is some of the positive feedback we received.

Amelia and I have been counting cars and measuring using her jug you gave us in the bath. We have also been moving objects and counting and working out what was left.

Thank you it was really helpful.

'Maths can be fun'! Myself and Thomas had a messy time making scones. We used the jug to measure, divided the dough in half and used the cutters to see how many we could make. Thomas managed one more than mummy. Thank you for another great workshop.

I helped Lyra to make cookies on Saturday. We measured out the ingredients together and made the mixture, then counted out the cookies and discussed how long they will take to cook. Thanks so much for the math's workshop – it's given us lots of great ideas.

Emily loves the number rhymes. We have counted shapes and beads. Emily put her toys in the bag you gave us to see if they were light or heavy. She even got in the bag herself!

*We only had a little watering can in the bath previously so by using the measuring jug Ellarose loved seeing all the different measures of liquid. She also enjoyed putting some bath toys in and out of the jug. So we kept adding and subtracting and it was really fun and made a change. Ellarose loved it and kept laughing. Great fun!
Fab workshop. Thank you sooo much. I always enjoy them.*

We bought a set of puzzles, mixed them all up, then separated them and counted them. And completed them. After the session, I realised that maths is not just about numbers, it is about much more. I will improve Aaron's maths skills through daily life.
