

Nursery Newsletter

19th May 2017

The children are demonstrating great knowledge in understanding of the world; learning about growing and life cycles and change and decay over time. They have really developed lots by observing the real life experiences that we have been fortunate enough to experience; animals, minibeasts and growing our own fruit and vegetables by taking weekly visits to the allotments.

It has been a lovely opportunity to take groups of children over to the allotments to grow fruit and vegetables. The children have regularly been visiting the patch to maintain and observe the changes and learning the development of plants and foods. These visits will continue.

"These are cabbages growing here"

"The strawberries are 8 centimetres!"

"Seeds, water and sun make plants grow"

"That was a beautiful walk"

We have also enjoyed the walk to the bluebell woods to observe the changes since our last visit. The children were amazed to see the woodland flooded in bluebells, looking closely and observing them and the naturals around, resulting in open ended conversations. The children have made some fantastic creations leading on from this.

"D-o-g...That says dog"

Home Learning

Why don't you go on an adventure and explore somewhere that you've never been before! Observe your surroundings using your senses. This could be trying out a new supermarket, or going to a different park, or going for a walk/scoot/bike ride and seeing where you end up.
